It is assumed that the building will be of a temporary type and will feature three or more separate sections for the housing of the men. These sections will be made of metal and will be moveable, allowing for easy transportation and relocation. The building will be equipped with all necessary facilities, including bathrooms, kitchens, and living areas. It will be designed to accommodate a large number of men, up to a maximum of 100 people. The cost of constructing and equipping the building will be estimated at $3,000 - $5,000 per unit, depending on the size of the structure.

Additional spaces for the housing of the men will be available, depending on the size of the building and the number of sections included. These spaces will be made of wood and will be designed to be both functional and comfortable. They will be equipped with all necessary facilities, including beds, desks, and storage. The cost of constructing and equipping these spaces will be estimated at $2,000 - $3,000 per unit, depending on the size of the space.

The construction of the building and the additional spaces will be completed within six months, allowing for the immediate occupation of the building. The building will be maintained and kept in good condition, ensuring the safety and comfort of the men who will be housed there.
The provision for losses in the Consumer Safety Trust Fund is as follows:

<table>
<thead>
<tr>
<th>Fiscal Year</th>
<th>Provision for Loss</th>
